## **Diagnostics** iQ4bike – Precise diagnostics for motorcycles

## A wide range of functions

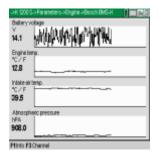

iQ4bike is a mobile diagnostic system for finding and correcting faults in electronic systems of motorcycles. This device will help you to find and clear faults in the electronic systems of modern motorcycles, scooters and quads much easier and faster than before.

Our arguments: Read/clear fault codes Parameter representation in figures and graphics Actuator test Basic setting (for example: BMW – ABS brake test) 2-channel multimeter 2-channel oscilloscope The large and clear display facilitates user-friendly operation

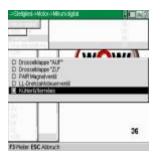

iQ4bike offers you a wide range of functions. Take a look at all the useful specifications:

Read/clear fault codes

Parameter representation in figures and graphics

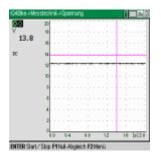

Actuator test for the activation of components
